

VirtualBox6 Installation Steps

Step 1 - Visit below given link to download Virtual Box setup

<https://www.virtualbox.org/wiki/Downloads>

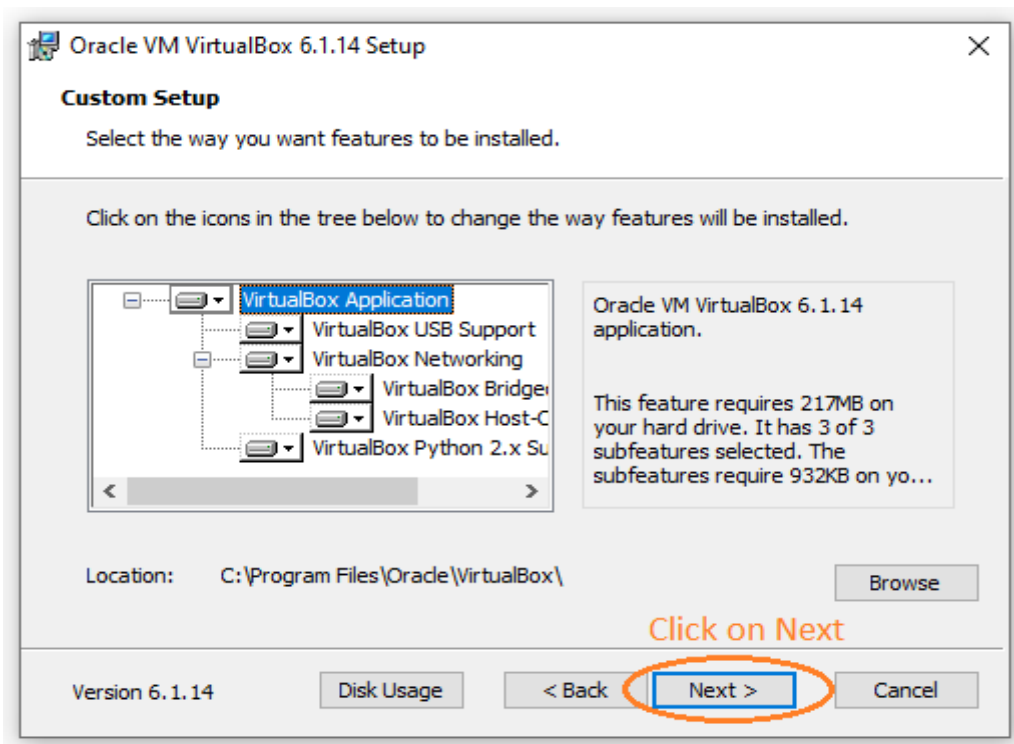

The screenshot shows the VirtualBox website's download page. On the left is a sidebar with links: About, Screenshots, Downloads, Documentation, End-user docs, Technical docs, Contribute, and Community. The main content area has the VirtualBox logo and the heading 'Download VirtualBox'. Below this, it states: 'Here you will find links to VirtualBox binaries and its source code.' The section 'VirtualBox binaries' follows, with a note about agreeing to terms. It then provides links for the latest VirtualBox 6.0 packages and VirtualBox 5.2 packages. Under 'VirtualBox 6.1.14 platform packages', there is a list of links: 'Windows hosts' (circled in orange), 'OS X hosts', 'Linux distributions', and 'Solaris hosts'. An orange arrow points from the text 'Click to download for windows' to the 'Windows hosts' link. At the bottom, there is a note about the GPL version 2 and a warning about SHA256 checksums.

Step 2 - Double click on downloaded file to install it. Click on Next
